

# CAT SCRATCHER INSTRUCTIONS

## Fixing on the Wall

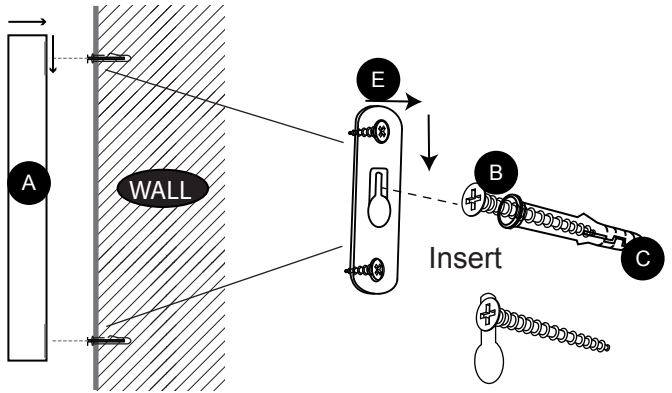

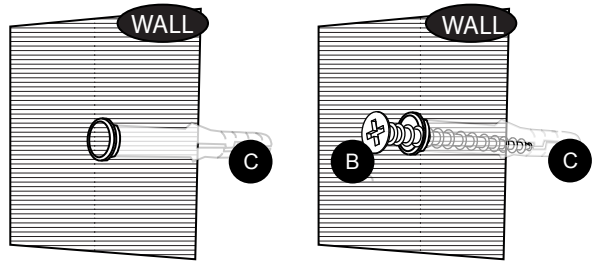

Steps:

On the back of the scratcher measure the distance between the holes in the metal brackets "E". Measure center to center of the holes.

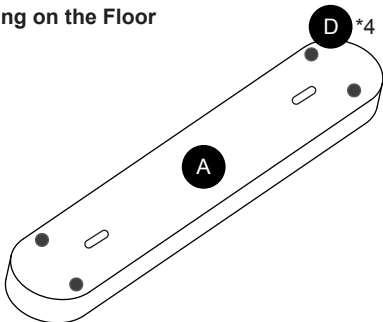

With the measurement you now have, measure vertically on your wall - this is for the fixings "B" and "C".

Always use plugs "C" for fixing, except when you have a wall stud available to use.

Once screws "B" are screwed into the wall leave the head of the screw out approx 1/4 inch (adjust to your liking) so that you can slide the cat scratcher, using the fixed hangers (E) on the back side of the cat scratcher.

## Using on the Floor

Step: Put 4 rubber stickers D on the back of scratchers, as pictured, then put it on the ground.
